Vikas GJ

Software Engineer

Malnad College of Engineering • 2025 Pass out

vikasgj8@gmail.com | +91 8431661503

EDUCATION

Bachelor of Engineering 2021-2025
Information Science and Engineering 8.48 (CGPA)
Malnad College of Engineering, Hassan

Pre-University Education 2019-2021
Brigade PU College, Hassan 88.5%

Secondary School Leaving Certificate 2018-2019
HKS International School, Hassan 83%

INTERNSHIP

Junior Software Engineer - Intern
***WOISWP Technologies Pvt Ltd, Bangalore* | On-Site** **Feb 2025 – Present**

- Contributed to the development of scalable and secure web applications using **Python** and **Django**, focusing on backend architecture and system reliability. Collaborated with teams to understand requirements and improve system efficiency
- Designed and implemented **RESTful APIs** with Django REST Framework (DRF) to enable smooth, modular communication between frontend and backend components, and supported business workflows and data processing
- Integrated **JWT-based authentication** and Enhanced **database performance** and **optimized queries** for faster, real-time data processing; participated in **Agile sprints**, feature discussions, and collaborative code reviews.

TECHNICAL SKILLS

- **Technical skills:** Python, Django, React, HTML, CSS, JavaScript, MySQL
- **Software Engineering & Systems:** OOP, API Design & Microservices Basics, Debugging & Code Optimization
- **ERP Concepts:** SAP Basics, Business Process Understanding (SD Cycle), Agile methodologie, cBasic understanding of business requirements gathering and process mapping
- **Cloud & DevOps (Basics):** Cloud Concepts & Architectures, CI/CD & Deployment Workflows
- **AI/ML:** TensorFlow Lite, OpenCV (Image Processing), Basic Machine Learning Concepts
- **Tools & Technologies:** VS Code, Git, GitHub, PyCharm, Postman
- **Soft skills:** Problem solving, Self-learning, Communication, Adaptability, Team Collaboration

PERSONAL PROJECTS

Quad-Segretronics: IoT-Powered Waste Segregation System LINK

- Developed **Quad-Segretronics**, an IoT-powered waste segregation system with AI-based image classification on Raspberry Pi using TensorFlow Lite and OpenCV to intelligently sort plastic, glass, cans, and e-waste.
- Built a responsive web dashboard with HTML, CSS, and JavaScript for real-time monitoring and control, integrating embedded systems, Python, gear motors, and GPS modules for full-stack end-to-end functionality.

NeuroDetect: AI-Based EEG Seizure Detection Platform

- Built a full-stack web app using React and FastAPI for real-time EEG analysis and seizure detection
- Developed ML models (TabNet, QDA) achieving ~94% accuracy
- Implemented signal processing and feature extraction pipelines using Python libraries
- Created REST APIs and dashboards for patient management and real-time visualization

DevOps-Based Django Cloud Application
Tech Stack: Django, Docker, Kubernetes, AWS, GitHub Actions

- Built and containerized a Django REST API using Docker, and deployed it on AWS EC2 with PostgreSQL integration.
- Implemented CI/CD pipeline using GitHub Actions and managed container orchestration using Kubernetes (Minikube).

CERTIFICATIONS

- **Full Stack Web Development** - J V Global Services & Take It Smart
- **IBM** - Python for Data Science, AI & Development
